TREES FOR TOURISM

Trees for tourism is a program of the South African Reforestation Trust

“Die Bron Primary School” in Stanford is planting 100 (and maybe more) indigenous trees in the schoolyard.

The schoolyard of Die Bron Primary School is at present somewhat bleak, mainly devoid of anything and exposed to wind and harsh sun.

Planting trees will provide a welcome greening of the children's environment and will provide shade and shelter from wind.

It will teach the children to appreciate the beauty of our South African nature and their own environmental heritage.

It will bring birds and other small wildlife into the schoolyard and into the life of the children.

The trees will create a soft and green barrier between children of different age-groups.

The trees will be planted by the children themselves under supervision of the school staff and the South African Reforestation Trust.

The tree planting will be done together with an education project about South African trees and forests :

- the importance of forests for our health and well-being
- the benefits and functions of forests for the land
- the uses and specifics of individual tree species

TREES FOR TOURISM

Trees for tourism is a program of the South African Reforestation Trust

The South African Reforestation Trust (SART) is recreating pristine indigenous forest eco-systems in different sites spread out over the Western Cape:

- *Farm 215 - private nature reserve near Gansbaai*
- *Grootvadersbosch Conservancy near Heidelberg*
- *Reflections Eco Reserve near Wilderness*
(a site near Stanford will be added soon)

Funding for these reforestation activities is generated through programs, such as Trees for Tourism (www.treesfortourism.co.za), involving hotels, guesthouses and other tourism operators to market the sales of trees.

The SART is also initiating, assisting and coordinating tree-planting projects in urban and semi-urban areas for the benefit of schools and other non-profit sectors.

“Die Bron Primary School” in Stanford is the first such project in the Overberg.

Funding for these local school projects are done by the local community and local business.

AND THAT IS YOU !

Buy a tree for R 150 to be planted out in the schoolyard of Die Bron and your tree will become part of a “schoolyard forest” which will witness children playing under its canopy for generations to come.
